## A Dangerous Snake

The African Rock Python lives in the savanna. It grows to 26 feet long. It is a constrictor snake. It kills its prey by wrapping itself around the animal until it can't breathe. The snake has no teeth and swallows its food whole. The African Rock Python can open its mouth so wide it can swallow an antelope.

---

Answer each question with a complete sentence.

1. Where does the African Rock Python live?

\_\_\_\_\_

2. What kind of a snake is it?

\_\_\_\_\_
